TITLE: Determination of artificial comet coordinates

PERIODICAL: Referativnyy zhurnal. Astronomiya i Geodeziya, no. 12, 1961, 21, abstrakt 12A188 ("Izv. Astrofiz. in-ta AN KazSSR", 1960, v. 10, 35-36 Engl. summary)

TEXT: The authors present the results of determining the position of an artificial comet on the basis of photographs taken on September 12, 1959, at the Mountain Astrophysical Observatory in Alma-Ata by means of a Kometa-A camera ( $D=100$  mm,  $F=500$  mm) and a meniscus astrograph ( $D=500$  mm,  $F=1,200$  mm) (cf. RZhAstr, 1960, no. 9, 9302). The measurements were carried out on devices КИМ-3 (КИМ-3) and УИМ-21 (УИМ-21); positions of two control stars and of three fundamental ones were measured. Coordinates of three positions of the comet are given. The determination accuracy varies, dependent on the image density, from  $\pm 2''$  to  $\pm 7''$ . ✓

TITLE: Elliptical polarization of emission of crab nebula  
SOURCE: AN SSSR. Doklady, v. 168, no. 2, 1966, 304-307

TOPIC TAGS: nebula, astronomy

ABSTRACT: Photographic observations of the nebula M1 in the band 5300-6300 Å were made in October-December 1964 using an automatic polarigraph adapted to the 50-cm meniscus telescope of the Astrophysical Institute, Academy of Sciences Kazakh SSR. A phase plate close in properties to a quarter-wave plate ( $\lambda/4 = 5340 \pm 40$  Å) and the nonmonochromatic character of the radiation was taken into account. Data were obtained on the elliptical radiation of Crab nebula. Its ellipticity is beyond question. Figure 1 is a resulting diagram of the elliptical polarization of Crab nebula. It was found for the nebula that the degree of elliptical polarization  $P$  exceeds the value of the "degree of polarization"  $P_1$  obtained on the assumption that the emission is partially (plane) polarized by an average of  $5 \pm 3\%$ . The analysis reveals that ultrarelativistic electrons in the nebula M1 move for the most part in directions opposite the magnetic field. This paper was presented by Academician V. G. Fesenkov on 23 August 1965. The authors thank D. A. Rozhkovskiy, V. N. Kessenikh, A. V. Kurchakov, and A. B. Gil'varg for assistance in carrying out this work. TITLE: The change in the higher nervous activity of monkeys during radiation sickness

PERIODICAL: Zhurnal vysshey nervnoy deyatel'nosti, v. 12, no. 3, 1962, 472-480

TEXT: No data on the effect of radiation on the higher nervous activity in monkeys are available from studies of the conditioned reflexes. Steady conditioned reflexes were developed in monkeys and their higher nervous activity was studied before irradiation. The experiments were performed on 6 hamadryad female monkeys aged 7-10 years. The animals were subjected to a single whole-body X-ray irradiation of 378 r and 399 r from a PYM-3 (RUM-3) unit at 21 r/min. This resulted in phasic disorders in CNS activity, whose severity depended primarily on the typological characteristics of each animal. Thus, the same dose had a different effect on the brain, blood, and cardiovascular system of each animal. During acute radiation sickness, a prolonged suppression of cortical excitability occurred and there were signs of disorders in the main nervous processes. Conditioned reflex activity returned completely one and a half years after irradiation whereas the autonomous activity returned earlier. There are 5 figures

AUTHOR: Dzhalagoniya, Sh. L.

TITLE: Remote sequelae of changes in the reactivity of the cerebral cortex in monkeys subjected to ionizing radiation

PERIODICAL: Zhurnal vysshey nervnoy deyatel'nosti, v. 12, no. 4, 1962, 623-629

TEXT: Only a few studies have been made on the reactivity of the cerebral cortex after recovery of the CNS from radiation trauma. Steady conditioned reflexes were developed in five monkeys prior to a whole-body single X-ray irradiation with 378-399 r. One year later the monkeys had recovered from a moderate radiation sickness. The conditioned reflexes had completely recovered by that time. Subjection of the animals to various conditions of stress brought about the development of severe neurosis which did not occur under similar conditions before the irradiation. The vulnerable cortex is regarded as a residual consequence of the radiation sickness to which the animals had been subjected. This phenomenon of the reactivity of the cerebral cortex after recovery from radiation injury may serve as a pathogenic factor for the experimental development of neuroses in monkeys. There are 2 figures and 1 table.

TITLE: Equilibrium equations for tapered cylindrical shells under arbitrary load

SOURCE: AN AzerSSR. Izvestiya. Seriya fiziko-tehnicheskikh i matematicheskikh nauk, no. 4, 1965, 103-105

TOPIC TAGS: cylindric shell structure, partial differential equation, elliptic equation

ABSTRACT: A simplified method is given for solving the following set of differential equations for the equilibrium of a tapered cylindrical shell:

$$\begin{aligned}
 \frac{\partial N_1}{\partial \alpha} + \frac{\partial S}{\partial \beta} + AX &= 0; & -Ak_2N_2 + \frac{\partial Q_1}{\partial \alpha} + \frac{\partial Q_2}{\partial \beta} + AZ &= 0; \\
 \frac{\partial N_2}{\partial \beta} + \frac{\partial S}{\partial \alpha} + AY &= 0; & \frac{\partial M_{12}}{\partial \alpha} - \frac{\partial M_2}{\partial \beta} - AQ_2 &= 0; \\
 && \frac{\partial M_{12}}{\partial \beta} - \frac{\partial M_1}{\partial \alpha} - AQ_1 &= 0. \tag{1}
 \end{aligned}$$

Istoriko-astronomicheskiye issledovaniya, vyp. 4 (Studies in the History of Astronomy, Nr. 4) Moscow, Fizmatgiz, 1958.  
592 p. 1,500 copies printed.

Resp. Ed.: Kulikovskiy, P.G., Docent; Eds.: Rakhlin, I. Ye., and Reznikovskiy, P.T.; Tech. Ed.: Gavrilov, S.S.; Editorial Board of Series: Vorontsov-Vel'yaminov, B.A., Professor Kukarkin, B.V., Professor, Kulikovskiy, P.G. (Chairman, Committee on the History of Astronomy, Astronomical Council USSR Academy of Sciences) and Perel', Yu. G. (Scientific Secretary, Committee on the History of Astronomy, Astronomical Council, USSR Academy of Sciences)

PURPOSE: This book is intended for both the general reader and the specialist interested in the historical development of astronomy.

COVERAGE: This collection of articles by different authors is the fourth in a series on the history of the development of astronomy in Russia. The present volume is divided into three parts: an

Card 1/5

Studies in the History of Astronomy

SOV/1380

introductory section, a section of articles and studies, and a final section containing data and documents. The first article, the longest and most thorough, traces the development of stellar astronomy in Russia during the XIX century. The remainder discusses various topics in the field of astronomy, such as the contributions of outstanding personalities, both in and outside of Russia, Russian observatories, the development of astronomy in China and Georgia, etc. Valuable historical findings are brought to light in the form of new archival discoveries. The text is accompanied by photographs, diagrams and bibliographic references.

PERIODICAL: Izvestiya Vsesoyuznogo Geograficheskogo Obshchestva, 1958,  
# 1, pp 95 - 98 (USSR)

ABSTRACT: The reviewers criticize a book "The Tadzhik SSR"  
(Tadzhikskaya SSR) composed by a large collective of authors  
(D. A. Chumichev, P. N. Ovchinnikov, A. V. Popov, Yu. L. Shchetkin,  
A. Dzhallilov, V. A. Kozachkovskiy, B. Kh. Karmysheva, M. R.  
Rakhimov, I. K. Narzikulov, S. L. Malayeva). This book gives a  
general picture of Tadzhikistan. A great part of the work is  
devoted to physico-geographical matters, connecting natural  
description with economic evaluations.

However, there is a series of deficiencies such as problems  
of divisions, into districts, which are insufficiently covered,  
wrong descriptions of some natural phenomena and erroneous  
economic recommendations. Many facts relating to nature and  
economics are obsolete. On the basis of the mentioned obser-  
vations the book cannot be recommended to a large circle of  
readers.

AUTHOR: Avazov, E. N.; Dzhalilov, A. D.TITLE: Weakening of reactions to typhoid-paratyphoid B vaccine

SOURCE: Meditsinskiy zhurnal Uzbekistana, no. 5, 1965, 77-79

TOPIC TAGS: vaccine, disease control

ABSTRACT: Pyraminal (0.25 pyramidon, 0.03 caffeine, and 0.02 luminal) was administered to children to reduce the reactions to vaccination produced by typhoparatyphoid B vaccine. One group of children (378) received a half or whole tablet of pyraminal, depending on their age, 4-5 hours after vaccination. Another group (348) served as the control. General and local reactions were checked 10-12 and 24 hours later. The intensity of the temperature reaction was much weaker in the experimental group than in the control. The total of moderate ( $37.6-38.5^{\circ}\text{C}$ ) and severe (over  $38.5^{\circ}$ ) reactions was 18.8 and 76.1%, respectively. Twenty-four hours after vaccination, among those who received pyraminal there was only a moderate decrease in the number of weak reactions ( $37.1-37.5^{\circ}$ ), whereas the total moderate and severe reactions were almost identical in both groups. Pyraminal also had a marked

Card 1/2

L 00921-66

ACCESSION NR: AP5018539

analgesic effect. Ten to twelve hours after vaccination, 18% of the experimental group had headaches, 9% had muscle pain, and 22% had pain at the injection site as compared with 89, 18, and 100%, respectively, of the control group. The effect of the drug was somewhat less 24 hours after vaccination. Other reactions - malaise, chill, etc. - paralleled the temperature reaction. Orig. art. has: 2 tables.
